HEALTHCARE

The Art of Healing Spaces

In modern healthcare, each room is a critical component of the recovery process. At Trinity Furniture, we believe that design – driven interiors can do more than just look good, they actively shape the patient’s journey and empower the caregivers who support them.

With over forty years in business, we understand that every detail matters. We partner with providers to create welcoming environments that balance clinical excellence with human comfort. By combining tailored design with the longevity of expert craftsmanship, Trinity ensures that your investment works as hard as your staff does, today and for years to come.

Facelift: Engineering the Forever Interior

Design integrity shouldn't have an expiration date. The Facelift Collection was engineered to solve the most persistent challenge in healthcare design: the inevitable wear of high-traffic environments. By decoupling the upholstery from the structure, we've created a system that evolves with the facility.

- Tool-Free Renewal: Our signature Velcro attachment system allows for immediate cover replacement.
- No downtime, no out-of-service rooms, and no specialized tools required.
- Total Encapsulation: An antimicrobial moisture barrier fully protects the seat, back, and arms, ensuring the internal integrity of the piece remains uncompromised.
- Industrial Strength: Beneath the refined exterior lies a hybrid steel and plywood frame rated for 1,000 lbs, backed by a Lifetime Warranty.
- Infinite Repairability: Every component — from cushions and suspension to legs and frames — is replaceable on-site, drastically extending the product's lifecycle and reducing landfill waste.
- Standard Feature: Facelift removable covers come standard on all Facelift Collections.

Facelift Evolve

The Versatile Standard — As our most expansive and technically diverse collection, Evolve is the cornerstone of the Facelift family. Designed with a transitional aesthetic that integrates seamlessly into any architectural scheme, it offers an unmatched range of configurations. From standard lounge and bariatric seating to high-acuity solutions like weight activated and Trendelenburg recliners. Whether specified with fully upholstered arms or high-performance urethane, Evolve is engineered for the 24/7 healthcare environment. It combines a sophisticated, human-centric aesthetic with the extreme durability and onsite renewability required for the most demanding acute care settings.

Swerve

Arc & Scale — Swerve lounge seating blends contemporary minimalist styling, sleek tailoring, and luxurious comfort. Each Swerve frame is fabricated, only as needed, using a pioneering and innovative flat panel construction technique...ecologically friendly and greatly reducing inventory and manufacturing costs. Swerve lounge offerings are available in two stylings with multiple base / leg options to choose from.

Austen

Defined by Durability — Austen is engineered for the high-traffic demands of modern public and transition spaces. Built on the foundation of a high-strength, powder-coated metal frame, this collection offers a crisp, architectural silhouette without sacrificing ergonomic comfort. Proudly manufactured in the USA, the Austen family is a comprehensive modular system, ranging from high-back lounge and bariatric guest seating to benches and companion tables. Designed for longevity, every unit utilizes modular joinery to facilitate seamless on-site maintenance. To further enhance its clinical performance, Austen can be specified with our signature Velcro-attached upholstery and antimicrobial moisture barriers, providing a sophisticated, renewable solution for the most rigorous healthcare environments.

Facelift Replay

Enduring Comfort, Scaled for Use — Replay balances a contemporary silhouette with a generous, inclusive scale. Featuring a wider arm profile for enhanced tactile support, this collection is engineered for versatility across healthcare and corporate sectors. Whether configured as a glider, medical recliner, or respite unit, Replay delivers uncompromised product quality and high-occupancy durability with a clean, approachable aesthetic.

Facelift Revival

Classic Comfort for Healing Environments — Designed with a nod toward traditional hospitality, Revival features softly rolled arms and plush cushioning that prioritize a sense of home. Its generous seating surfaces and familiar forms make it a preferred selection for senior living and therapy areas. Revival offers a complete suite of patient-centered solutions, including gliders and recuperative units, that bridge the gap between clinical performance and residential warmth.

Steel

The Precision of Permanence — Defined by its exquisitely crafted stainless steel framework, this line offers a timeless silhouette that commands attention while remaining fundamentally versatile. The collection is an exploration of geometry and texture, featuring a signature square-arm profile available in brushed stainless or powder-coated finishes, alongside a sculptural rounded-arm edition in brushed stainless steel. Available in both low and high-back guest and bariatric scales, the Steel series is further refined by a curated palette of polyester arm caps. This is seating designed for the discerning eye. A seamless fusion of high-modernist form and the unrelenting durability of premium steel construction.

MEDICAL CENTER
"Higher standards of care every day"

Facelift Crown

Modern Precision & Form – The newest addition to the Facelift family, Crown, brings a sophisticated, architectural edge to contemporary commercial and healthcare interiors. Characterized by sleek lines and striking angular silhouettes, this lounge and table collection is designed for the modern eye. While visually lightweight, Crown maintains our rigorous performance standards while offering a design-forward solution that never compromises on hygiene or onsite renewability.

Ace

Elegance in Every Environment – The Ace Recliner is defined by a rare balance: a high-performance clinical tool with a graceful, fully-finished silhouette. Unlike traditional healthcare seating, Ace is designed with a 360-degree aesthetic, ensuring it maintains a refined presence from any angle, whether positioned as a focal point in a recuperative care suite or tucked neatly into a private patient room. Beneath its approachable, residential exterior lies a masterclass in healthcare maintenance. Ace introduces a common sense approach to hygiene, featuring a completely sealed seat cushion system that acts as a fortress against liquids and debris, protecting the internal mechanism. With the signature Facelift DNA: Velcro-attached upholstery and antimicrobial moisture barriers, Ace offers a truly renewable lifecycle.

Hi + Lo

Shaping the Interior Landscape — Designed with a clean, contemporary vernacular, this collection allows designers to master the visual landscape of a space by playing with verticality and scale. By alternating between high-back privacy and low-back openness, Hi + Lo creates intuitive zones for collaboration or quiet respite within a larger footprint. The system is built for total rhythmic flexibility, offering straight and curved configurations that can be seamlessly combined. From backless benches to tiered lounge units, every element is engineered to integrate integrated power and companion tables, ensuring the furniture is as functional as it is sculptural. Hi + Lo empowers the designer to transform open-concept environments into curated, purposeful experiences without sacrificing the ease of onsite renewability.

Crest

Refined Serenity — Crest offers a subtle, sophisticated approach to personal space. Its silhouette features softly padded arms that flow into elegant, sculptural wings, providing a sense of enclosure without fully disconnecting the user from their surroundings. Enhanced by a signature headrest pillow and meticulous stitching details, Crest is the ideal choice for executive waiting areas and private suites where comfort and understated privacy are paramount.

Wingding

The Acoustic Cocoon — Wingding is a dramatic statement in both form and function. Engineered to offer a cocoon of comforting space, its vertical front wings are specifically designed to restrict peripheral visual contact, providing an immediate psychological sense of safety and solitude. Whether specified as a swivel-base privacy chair for collaborative zones or a relaxed lounge for respite, Wingding acts as a functional sound barrier, making it a powerful tool for large, open-concept lobbies and education-focused healthcare hubs.

Thank You.
